Re: Sabotage Equipment

Chris-

After trying out all of the equipment for Sabotage under the current temperature in the game room which feels like a meat locker, I believe we have two options. We can

- 1) Stop the game until we can fix the thermostat to a warmer temperature or
- 2) Buy fresh ammunition.

It took me some time to get the goggles to fit properly, which can be a real problem.

I know that we are trying to save up money from this opening paint ball session in order to expand RAGE in other areas, but gear is not something that be cutback on. If cost is a concern, I can arrange for us to rent equipment from Uncle Jose. It would be a cheap, short term solution but it could at least provide adequate gear through the season.

Last time I brought this problem up you yelled at me, so if you want to talk this tin you'll have to come to me.

## **EXHIBIT 5**

**Patient Summary:**  
**Attending Physician:**  
**Date:**

**Jamie R. Killili**  
**Dr. Carey Castro**  
**03/26/03**

### **Remarks:**

Patient Jamie Killili presented on March 26, 2003 suffering from apparent blunt head trauma. Patient reports that s/he was hit in the head-left temple and occipital bone. Patient is a high school volleyball player and both patient and coach report the blow was strong and patient fell to the floor becoming unconscious for a period of 1 to 2 minutes. Patient was revived by smelling salts.

Patient appears alert and oriented, pupils have excessive dilation but there is no external bleeding. Substantive bruising extends from the top of the left occipital to the left cheekbone. Patient reports tenderness, but swelling is within normal limits and there is no sclera damage in the eye.

### **Diagnosis:**

Probable concussion with concurrent bruising and swelling. Patient's mother should closely monitor for 48 hours and immediately return if behavioral changes are noted. Patient should avoid strenuous activity and all contact sports for 7 days.

Recheck in 7 days.

**EXHIBIT 6**

**Patient Summary:**                    **Jamie R. Killili**  
**Attending Physician:**                **Dr. Carey Castro**  
**Date:**                                    **4/03/03**

**Remarks:**

Patient returned for recheck from prior head trauma. Healing has progressed normally. Subcutaneous hematoma is fading. No neuro-muscular damage noted.

**Diagnosis:**

Patient may return to normal activity in 7-10 days.

## **EXHIBIT 7**

**Patient Summary:**                    **Jamie R. Killili**  
**Attending Physician:**            **Dr. Carey Castro**  
**Date:**                                    **4/12/03**

### **Remarks:**

Patient presents with dizziness, slurred speech and nausea. Patient had prior head trauma on 03/26/03 which recheck revealed was healing normally. Patient initially claims no subsequent injury, later stating s/he sustained trauma to head while playing paint ball. Paint ball- pellet like object- struck patient in the left temple. Substantial bruising impaired. Immediate CAT scan ordered. CAT scan reveals fluid accumulation/ swelling in the cranial cavity probable cause of neuro –muscular problems. Swelling appear to have stabilized.

### **Diagnosis:**

Condition can be managed with medication. Patient ordered to engage in complete bed rest for 3 days and reduced activity thereafter during healing period.  
Recheck in 3 days.

## **EXHIBIT 8**

**Patient Summary:**                    **Jamie R. Killili**  
**Attending Physician:**            **Dr. Carey Castro**  
**Date:**                                    **4/16/03**

### **Remarks:**

Patient continues to exhibit signs of substantive pain, dizziness, and nausea from head trauma received on 4/10/2003. Swelling had been reduced. Patient appears to be healing normally but full recovery may take several weeks due to the severe nature of the recent trauma.

### **Diagnosis:**

Pain medication prescribed. Dizziness and nausea are to be expected during healing period.

### Paintball Safety Statistics

Paintball games are safer than most sports except perhaps tiddlywinks. When played properly, Paintball is very safe. The following are statistics comparing various sports.

Sports Accidents\*

Source: National Safety Council

Sport	Yearly Injuries (per 1000 participants)
Paintball	.31
Bowling	.50
Archery	.66
Boating	.92
Tennis	1.09
Golf	1.13
Swimming	1.30
Fishing	1.37
Water Skiing	1.90
Handball	2.42
Raquetball	2.52
Ice Skating	2.79
Volleyball	4.43
Gymnastics	7.13
Soccer	10.54
Bicycle Riding	11.30
Boxing	11.34
Basketball	22.04
Rugby	23.14
Wrestling	27.37
Football	27.50
Baseball	27.67
Running (0-19 miles week)	294.00
Running (20-29 miles week)	384.
Running 30-39 miles week)	461.00

Injury is defined as one that result is in some degree of permanent impairment or renders the injured person unable to effectively perform his regular duties or activities for at least one full day beyond the day of the injury.

## Alex Park's Operation Action Oceania Review

### **RAGE Enterprises, Saipan, CNMI**

#### **Course Design:**

This course had a truly interesting design that lends itself to many different games. The layout of the capture the flag is superb. Close quarters lead to some welcomed in-fighting and sneak attacks. If the indoor field was any smaller, players could start counting the welts from point blank shots. As it is, you're still never safe on this course. If you're in Saipan, its definitely worth a visit.

#### **Equipment :**

Guns and ammo are decent but older. Safety gear meets international standards.

#### **Safety:**

The safety aspect of RAGE leaves a little to be desired. The biggest hazards were some shallow holes and unstable obstacles in the field.

#### **Overall:**

This little course in the small islands of Saipan turned out to be a pleasant surprise. It's brand new and needs to be better organized, but for the most part, its top notch filed and complex
